DETAILED ACTION

Drawings

1. The drawings were received on 07-21-04. These drawings are approved.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1,2,3,5, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Parker et al(US 5,260,979).

The reference to Parker et al discloses a redundant clock module, see figure 1, having two oscillator clock inputs(primary-REFCLK1, secondary-REFCLK2), the monitoring circuit includes selector(14), MUX(12), and PLL with VCO(24); the lop being analog; the detection circuit (36,38) are used to detect failure or tolerance condition(out of lock signal). Each of the oscillator clock signals are provided with the monitor/detect circuit to compare the oscillator(REFCLK) frequency to the VCO frequency(See col. 4, lines 15-55). In col. 16, lines 51-55, a visual indication of a problem is given by a failure light.

Allowable Subject Matter

4. Claims 4,6,7,8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
